Thank you. (No pages reloaded) "Option in the configurations of the format solves the problem. ©Also, check the WPML -> translation to see if you have a string for the sending URL, maybe the string needs to be translated. Check the box to activate "Store A Language Cookie to support language filtering for AJAX." You will find the necessary fields for this below the comment area when you log in to leave your next answer. Use a hidden field that has the {Current_url} Magic Tag as its value, and then use the magic tag for that field as the URL setting in the redirect processor. The translation is ok, but© I have a problem with the URL. Disable Ajax submissives - turning ajax submissives, the process of sending the form will require an update. Briceb-3 it's good that I sent a backup versite some time ago. Can you please double-check the credentials and make sure the URL is correct? Thank you Lauren Supporter Languages: English (GMT / New_York) -05: 00) Please see this documentatio n de caldera: hidden link does the form shows that the message with WPML disabled? You can edit your previous answer if necessary. Shape may not work properly. As noted in caldera's documentation, disabling the "Enable Ajax submissives. Briceb-3 I changed the Permalink with Dennis due to a conflict with a final member, to lang/en to a Permalink directive. You can continue to try to solve the problem of the Caldera form. By pattern, caldera's formulateds do not update the page after a submission of form. Now you can see that the message does not appear in the format in English. This article will explain how you can reload the same page after Caldera Forms sends. This works, but it's© not a great experience of the user. Although I'm not making changes that affect the live site, it's still© a make backup of the site before providing us with access. For string translation, I have no idea what I have to look for. Thank you! Privacy and and Policy We have strict policies on privacy and access to privacy. your information. briceB-3 Hello, since yesterday, my web site is completely blocked with a 500 da error for WPML and does not work. - If you do not see the wp-admin/FTP fields, this means that your mail and website login data will be PUBLISHED. briceB-3 I am trying to: translate a boiler form. I suggest checking the debug log so that you can find out what is causing the debug log to be down. If it is WPML -> Languages and change the URL format to a different setting, then resave permalinks, still get the same error? What type of URL µ are you using for WPML? But since yesterday, nothing works. If you do not, please activate the private box. Also ©m, please go to WPML -> Languages and move to the Language Filtering section for Ajax. The private box looks like this: hidden link Lauren Supporter Languages: English (English) Timezone: America/New_York (GMT-05:00) When I try to access your Login Page, I receive a message that the website is in maintenance. Use a redirect process or to redirect with the {embed_post:permalink} magic tag as the URL setting on the redirect handler. This will work on individual or posts, but it is not the most reliable way to generate a URL for the current page. NOTE: The label {current_url} has been added in Caldera forms 1.5.2 Set up Caldera forms to redirect to the same page. Make sure you are using Caldera forms 1.5.2 or later. In case we need to debug more of the state, I will double the state and work in a separate local development environment to solve your live state. Our Debugging Procedures I will check the various settings µ the backend to see if the problem can be resolved. The error message appears in the English version and not in French. The information that will enter private, which means that it is you and I cannot see and have access to it. Do NOT your Details, unless you see the required WP-admin / FTP fields. I can get an instantaneous instant from your site and test locally if you prefer. They remember, I have told you in another passage about this problem, but at this time, when I recharge the pages, it works. Lauren SupPorter Languages: Spindle Horrico: AMÁ © Rica / Nova_iorque (GMT-05: 00) You can disable WPML renaming the SitePress-Multilingual-CMS plug-in folder. BRICEB-3 My problem is solved now. Thanks Lauren Support Languages: Spindle Horrico: AMÁ © Rica / Nova_iorque (GMT-05: 00) Thank you for allowing access. Step 1: Create a hidden field whose value is the magic mark {current_url} â € â €"Step 2: Create a redirection processor, with the field created in the magic tag of step s as the URL setting. Lauren SupPorter Languages: Spindle Horrico: AMÁ © Rica / Nova_York (GMT-05: 00) I would like to request temporary access (WP-admin and FTP) to your site to better analyze the problem. As soon as the error is resolved and I can access your site, I will be happy to continue the solution of problems. If you are redirecting to a different page in shipping, was this page translated? I'll be happy to help you with that. That's why I do not want to go back because it causes another problem. That's why I can not test without WPML. Does this solve the problem? I marked the "store a language cookie box to support language filtering for AJAX," but that does not solve the problem. Briceb-3 Olá, even if I disable all plugin, I have this error. See: ** Important ** - Make a backup of the site files and of the database before providing us with. Link to a page where the problem can be seen: hidden link Lauren SupPorter Languages: Spindle Horrico: America / New_york (GMT-05: 00) Thanks for in contact with WPML support. Lauren SupPorter Languages: English (English) (English) America / New_York (GMT-05: 00) If you disable all plugins and still have the error, the error does not seem to come from WPML. Please let me know if you need more help and I will be happy to help. The error message is: Send URL and current URL protocols do not match. This will bring your website back. back.
